a clear critical account of the major approaches to understanding visual perception it explains why approaches to theories of visual perception differ so widely and places each theory into its historical and philosophical context

this edition contains over 460 additional references and the treatment of visual psychology in the early chapters has been extensively revised

originally published in 1957 the primary aim of this study was to shed light upon the logical character of the psychology of perception d w hamlyn begins by delimiting the field of psychological inquiry into perception then gives a detailed account of the types of explanation appropriate in the field he maintains that these explanations have certain important peculiarities which distinguish them from other scientific inquiries in view of the central importance of gestalt theory in this field an account is given of its origins and its main features are critically discussed the work should still be of considerable interest to both philosophers and psychologists as well as to all those interested in the relations between the two subjects

introduces students to the basic biological and psychological processes and their development it discusses pattern recognition culture and attention and includes a brief discussion of artificial intelligence

this posthumous volume the culmination of a long and distinguished career brings together an original essay by the author together with a careful selection of previously published articles most by rock on the theory that perception is an indirect process in which visual experience is derived by inference rather than being directly and independently determined by retinal stimulation irvin rock was a global perceptual theorist in the grand tradition of von helmoltz wertheimer and gibson this posthumous volume the culmination of a long and distinguished career brings together an original essay by the author together with a careful selection of previously published articles most by rock on the theory that perception is an indirect process in which visual experience is derived by inference rather than being directly and independently determined by retinal stimulation rock s reasons for holding that perception is indirect were mainly empirical unlike many theorists he paid close attention to a broad range of experimental evidence in evaluating theoretical claims his approach in which theory and experiment go hand in hand is well represented in this book in the first chapter which is new rock lays out the theoretical issues underlying indirect perception the remaining twenty two chapters present detailed evidence in support of the indirect view they are divided into sections covering indirect perception organization shape motion illusions lightness and final considerations each section is introduced by the author stephen palmer s introduction to the book places rock s work within the context of the history of perceptual theory approaches formulated by helmholtz inferential by the gestaltist psychologists organizational and by gibson ecological cognitive psychology series

this volume synthesizes social cognitive ecological evolutionary neuroscience research showing that the way in which people perceive the world changes with their cognitions emotions goals motivations culture other factors traditionally considered exclusive to social personality cognitive psychology

how do we see this question has fascinated and perplexed philosophers and scientists for millennia in visual perception mind and world meet when light reflected from objects enters the eyes and stimulates the nerves leading to activity in the brain near the back of the head this neural activity yields conscious experiences of a world in three dimensions clothed in colors and immediately recognized as say ground sky grass trees and friends the visual brain also produces nonconscious representations that interact with other brain systems for perception and cognition and that help to regulate our visually guided actions but how does all of this really work the answers concern the physiology psychology and philosophy of visual perception and cognition gary hatfield s essays address fundamental questions concerning in part i the psychological processes underlying spatial perception and perception of objects in part ii psychological theories and metaphysical controversies about color perception and qualia and in part iii the history and philosophy of theories of vision including methodological controversies surrounding introspection and involving the relations between psychology and the fields of neuroscience and cognitive science an introductory

chapter provides a unified overview an extensive reference list rounds out the volume

the field of perception is devoted to explaining the operation of the senses and the experiences and behaviors resulting from stimulation of the senses perceptual processes such as recognizing faces seeing color hearing music and feeling pain represent the actions of complex mechanisms yet we usually do them easily the encyclopedia of perception presents a comprehensive overview of the field of perception through authoritative essays written by leading researchers and theoreticians in psychology the cognitive sciences neuroscience and medical disciplines it presents two parallel and interacting approaches the psychophysical or determining the relationship between stimuli in the environment and perception and the physiological or locating the biological systems responsible for perception are there any processes not associated with perception surely there are but the pervasiveness of perception is truly impressive and the phenomena of perception and its mechanisms are what this encyclopedia is about key features contains 16 pages of color illustration and photography to accompany the entries offers a varied and broad list of topics including basic research as well as methodologies theoretical approaches and real world applications of perceptual research emphasizes human perception but includes ample research because of its importance in its own right and because of what this research tells us about human perception written by recognized experts from many disciplines but for an audience with no previous background in perception students and members of the general public alike key themes action attention audition chemical senses cognition and perception computers and perception consciousness disorders of perception illusory perceptions individual differences human and comparative across species not including ageing disorders and perceptual development methods perceptual development experience philosophical approaches physiological processes sense interaction skin and body senses theoretical approaches visual perception

sensation and perception covers in detail the perceptual processes related to vision and hearing taste and smell touch and pain as well as the vestibular and proprioceptive systems individual chapters cover separate topics including the fast developing areas of perception of emotions and attractiveness and recognition of faces plus newer topics not seen regularly in other textbooks for example changes in perception throughout the lifespan and pathologies of perception key features chapters begin with summaries of key topics and questions to aid learning includes key points spotlights on research and thinking about research sections designed to encourage students to design their own studies chapters close with test yourself questions a review of key terms and annotated further readings

this book defines the terminology used in the fields of sensation and perception and describes the biological and physical bases required for understanding sensory experiences it offers more specifically an introduction to the study of psychophysics auditory perception visual perception and attention and discusses the basic concepts and mechanisms used to interpret different perceptual phenomena featured topics in this book laws of psychophysics including the discrimination law of weber and stevens power law psychophysical methods and signal detection theory hearing music and speech color form and depth perception the role of attention in perception sensory disorders

psychology of perception is an essential resource for undergraduate and graduate students interested in studying sensation and perception

gestalt theory and the psychology of visual perception form the basis for an analysis of art and its basic elements

foundations of perception provides a comprehensive general introduction to perception all the major and minor senses are covered not only examining them from a perceptual perspective but also taking into account their biological and physical context in addition to covering all material essential to understanding the functioning of the senses each chapter also includes a tutorials section this provides an opportunity for more advanced students to explore supplementary information on recent or controversial developments in subjects such as the physics and biology of audition shape and object perception individual differences in perception

first published in 1983 perception learning and the self is a collection of essays demonstrating the incompleteness of the information processing model in cognitive psychology and the connection between epistemic factors and social conditions in the making of the self it is suggested that any framework employed to view cognition must be an essentially social one in which knowers are seen as selves who are agents with feelings and attitudes professor hamlyn argues that by failing to acknowledge this social element the information processing model presents an overly simplistic view of the systems that underlie cognition and thus is liable to distort what is at stake professor hamlyn considers the contributions of a number of major psychologists to this area of study including james gibson jean piaget and sigmund freud this book will be of interest to students of philosophy and psychology
